**INVESTMENT OBJECTIVE**

The investment objective of the fund is to produce stable and consistent returns in the medium to the long term

**INVESTMENT POLICY**

The Sub-Fund shall invest predominantly in debt securities which may be listed on an Approved Regulated Market and/ or traded over-the-counter. The Sub-Fund shall hold a diversified portfolio of government, corporate and supranational bonds over a broad base of issuers and industries, or in bonds determined to be of comparable quality. The Sub-Fund may also limitedly invest in contingent convertible bonds and unrated bonds. The bond portfolio is not expected to have any particular duration. The Sub-Fund may hedge interest rate, currency and credit risk with a view to stabilize the expected returns of its portfolio and to reduce overall risks through the use of (i) listed and OTC FDIs including bond futures, currency forwards as well as interest rate and credit default swaps, and (ii) ETFs. The Sub-Fund will bear the associated costs and fees in connection with the use of such instruments. These fees will generally be payable to counterparties in OTC FDIs. Such counterparties are not expected to be related to the Company and/ or the Investment Manager. The Company may also enter into foreign exchange linked OTC FDIs with the Custodian.

**FUND PERFORMANCE**

**MANAGEMENT COMMENT**

October closed with a negative performance of 2.83% mainly due to the strong widening of credit risk of many European financial and insurance companies and of Italian construction sector. After Astaldi, which provided a positive contribution and now is not present anymore in the portfolio, other Italian construction companies like CMC Ravenna and Salini suffered a lot for the delay of payments from Italian local authorities. For the first time since 2014, Italian GDP failed to grow on a quarterly basis. The zero growth rate in 3Q 2018, which placed year-on-year growth at 0.8% y/y, confirmed that the slowdown of the Italian economy is not an occasional phenomenon. The Budget Law (DEF) could be responsible in part for the deterioration of business confidence, both for its composition and for its negative effects on country risk and, therefore, on financial conditions.

Anyway, we remained invested in Italian banks, reducing the total credit risk exposure vs Italy through short positions on Italian Government bonds, because we believe that a positive result of EBA stress test, which will be published in the first week of November, could help a recovery of the sector. The average rating of the sub fund came back "investment grade" and the net exposure to US market increased in line with the growth of the weight of US government bonds. Infact in October we registered a strong correction of US equity indexes and it affected to the credit spread of Hy companies like Western Digital, Centurylink etc.

We participated to the primary market of Netflix, buying the 2029 and selling the 2027, with a pick up yield above 0.7%. Playtech and reduced the exposure to company with high Debt/asset ratio like Picard, Pemex and Lecta.

The next month will continue to reduce the weight of companies with high ratio debt/asset, more sensible of the increase of interest rates specially in US.

### SRRI (Synthetic risk and reward indicator)

1 2 3 4 5 6 7

### RISK FACTORS

The above risk and reward indicator rates this Sub-Fund as category 3 meaning that it offers a moderate risk of making a loss but also a moderate chance of making substantial gains. Even the lowest category on the indicator does not mean risk free. The Sub-Fund's rating reflects the nature of its investments and the corresponding risks to which it is exposed that is based on simulated data and therefore not a reliable indication of the future risk profile of the Sub-Fund. The risk and reward profile of the Sub-Fund is not guaranteed to remain unchanged and may shift over time. These risk factors, which include below, may affect the value of the SubFund's investments / expose the Sub-Fund to losses

**Exchange Rate Risk** – The Sub-Fund may invest in assets denominated in currencies other than EUR, thereby exposing the Sub-Fund to fluctuations in exchange rates.

**Use of FDIs** – It is anticipated that the Sub-Fund will hold FDIs for the purpose of hedging interest rate, currency and credit risk. FDIs also involve risks which are different from, and in certain cases, greater than, the risk presented by more traditional investments.

**Credit Risk** – money market instruments, bonds or other debt instruments held for a fund involve credit risk represented by the possibility of default by the issuer. Debt instruments which are subordinated and/or have a lower credit rating are generally considered to have a higher credit risk and a greater possibility of default than more highly rated and/or unsubordinated securities.

**Operational Risk** – If a custodian or sub-custodian appointed by or on behalf of the Sub-Fund were to become insolvent, or act negligently or fraudulently this could lead to the substantial loss of securities held in custody for the Sub-Fund.
